

LED Street Lights Public Safety Benefits

LEDs will provide better, clearer, and more consistent light quality that will likely play a role in making Fayetteville's streets safer through:

- Fewer streetlight outages as LEDs have a life expectancy of 15 years, compared to 5-6 years of mercury vapor streetlights.
- A truer white light quality, which leads to better color rendering, allowing colors to seem more natural.
- More consistent distribution of light resulting in fewer dark spots.
