## PROJECT DESCRIPTION & JUSTIFICATION

Allowance for renovating up to 7,200 sq. ft. of unleased space at the RCWBC. The unleased space is located on the 1st, 3rd and 4th floors of the RCWBC and has the potential to accommodate multiple tenants, providing steady revenue to PWC. The building is currently 83% occupied with 4 vacant suites.

## PROJECT DESCRIPTION & JUSTIFICATION

This project addresses the basic safety and renovation needs as determined by the facility assessment done in 2017 in order to continue the maintenance operations for PWC vehicles and equipment. A combination of renovating the existing space to improve the layout and functionality of the fleet administrative areas as well as adding on additional bays better suited to accommodate the height and length of large vehicles.

## PROJECT DESCRIPTION & JUSTIFICATION

The administration and operations buildings are nearing maximum capacity which creates continuing challenges in trying to host meetings with external agencies, conduct internal staff meetings and expand the wellness program offerings. This project will create additional space for meetings, administrative functions, and fitness programs and equipment. An additional 30+ parking spaces will also be included in the scope of this project.

## PROJECT DESCRIPTION & JUSTIFICATION

Warehouse yard renovations and improvements are needed to correct storm erosion issues, inventory staging and protection problems and poor road conditions for heavy equipment. Currently most long-term inventory items are stored directly on ground surfaces and exposed to rain and direct sunlight. The shelf life of sewer and water pipe stored on the yard is significantly reduced due to long term exposure to direct UV sunlight. The same is true for wood cable spools on ground surfaces. The scope of work for FY 2021 includes final asphalt paving in Electric Yard and pipe and electric reel storage racks to complete all required upgrades.

Replace Fuel Island Diesel Storage Tank			Medium	New
			Low	Renovation
<b>BID DATE</b>	12/15/2020			
<b>START CONSTRUCTION DATE</b>	2/15/2021			
<b>EXPECTED COMPLETION DATE</b>	6/15/2021			
			<b>BUDGET CODE</b>	
			CPR1000461	

## PROJECT DESCRIPTION & JUSTIFICATION

The project will replace the existing 10,000 gallon diesel storage tank located at the fuel island with a new 20,000 gallon diesel tank. This increase in capacity is necessary to maintain operations during emergency and recovery efforts. PWC no longer has access to the City of Fayetteville fuel island for back up fuel purposes. During Hurricane Florence, we required in excess of 5,000 gallons of diesel per day for bypass pumps, generators and vehicles. We are also adding additional emergency diesel generators to the operations complex that will increase diesel fuel demand.

## PROJECT DESCRIPTION & JUSTIFICATION

Project will construct new administrative space inside the Thermal Energy Storage Building at Butler Warner Generation Plant for business continuity efforts. New construction will include new walls, doors, ceilings, HVAC, lighting, telecommunications, etc. for business continuity efforts in the event the Operations Center is unusable due to a disaster. This work will be completed after equipment has been removed.

<b>EXPECTED COMPLETION DATE</b>	11/30/2020			
			<b>BUDGET CODE</b>	
			CPR1000482	

## PROJECT DESCRIPTION & JUSTIFICATION

Due to the size/length of the steel power poles stored in the King Street Pole Yard, it is difficult for pole vendors to deliver to this site and for PWC crews and contractors to remove the poles when needed for projects and repairs. There is also a major safety concern for staff that must operate multiple forklifts to get to the King Street location. The new location behind the Warehouse Yard will allow for the safe delivery and distribution of these power poles as needed and will allow better access control for PWC contractors and vendors. This project will clear approximately 2 acres of land, install compacted ABC base, install new fencing and will include a new storm water retention pond.

## PROJECT DESCRIPTION & JUSTIFICATION

This project includes the installation of new services and water main extensions by PWC personnel and contracted labor to serve new customers. It will also include installation of parallel mains where needed. This project will add new customer base and provide system growth. An estimated 130 new customers will be added each year by new water service laterals tapped onto existing or newly installed mains. Revenue is based on 130 new customers times the connection fee of \$5,749 plus 130 customers times the average bill of \$26.40 times 12 months.

## PROJECT DESCRIPTION & JUSTIFICATION

This project will replace existing water laterals that have reached or exceeded their life expectancy and are not cost effective to repair. This work is also coordinated with NCDOT and City Street Resurfacing and Streetscape projects to avoid cutting pavement in streets that have been recently resurfaced. Renewing services defers or reduces operating maintenance costs.

## PROJECT DESCRIPTION & JUSTIFICATION

This project will reline existing cast iron water mains and replace existing water mains. Due to the age and condition of these mains, some areas of the distribution system are experiencing discolored water, reduced pressure, and reduced fire flows. This work is necessary to maintain the integrity of PWC's system. Additionally, deteriorated water laterals will be replaced as part of this effort. The budget will increase in order to rehabilitate or replace 1% of the system by FY27, in accordance with the asset management plan.

## PROJECT DESCRIPTION & JUSTIFICATION

PWC currently serves approximately 1,000 customers in the Gallberry Farms Area (along Chicken Foot Road east of I-95) including 3 schools. This area is currently served by a single 16" water transmission main which branches off of Sandhill Road. This project will connect the existing 12" water main on Braxton Road to the 16" transmission main on Chicken Foot Road. This will provide a second feed to the area to improve system reliability. This project has been scheduled to start after NCDOT's planned realignment of Braxton and Sandhill Roads.

## PROJECT DESCRIPTION & JUSTIFICATION

This project provides water service to Construction Areas 11, 23, 25, 29, 30, 31, 32, 33, and 34 annexed into the City of Fayetteville in 2005. Area 11 was completed in FY13. Area 23: Design began FY18 Construction began in FY20; Area 25: Design began in FY19 Construction begins in FY21; Area 29: Design begins in FY21 Construction begins in FY22; Areas 30 and 31: Design begins in FY22 Construction in FY23; Area 33: Design begins in FY21 Construction in FY22 and FY24; Areas 32 and 34: Design began in FY18 Construction begins in FY20. Approximately 70,000 LF of water mains and 472 new water services will be added. Connection rates are assumed to be 50% first year 10% second year 5% each year after. The assumed revenue per customer is \$26.40 with no escalation of the revenue over time.

## PROJECT DESCRIPTION & JUSTIFICATION

This project replaces water mains that are not currently encased that are located under railroad crossings. Water main leaks and breaks on mains not encased can cause railroad tracks to settle. Engineering will be completed by in-house staff and consultants. It is anticipated that the design for all of the crossings will be completed in FY20. Beginning in FY20, two (2) crossings per fiscal year will be constructed. Construction will be by contractor.

## PROJECT DESCRIPTION & JUSTIFICATION

PWC currently serves approximately 2,100 customers in the Gray's Creek Area (east of I-95 and south of Tom Starling Road) including 3 schools and the Walmart Distribution Center. This area is currently served by a single 24" water transmission main which branches off of Tom Starling Road. This project will interconnect the existing 16" transmission mains that have been stubbed out on both sides of I-95 along Chicken Foot Road. This will provide a second feed to the area to improve system reliability.

## PROJECT DESCRIPTION & JUSTIFICATION

The Churchill Downs and South Forty Drive area of Cypress Lakes is currently served by a single 6" water distribution main. This project will extend a new 12" water main along Sandhill Road to South Forty Drive. This will loop the area water lines and improve system reliability.

## PROJECT DESCRIPTION & JUSTIFICATION

This project will improve the transmission system along Cliffdale Road by replacing approximately 3,000 feet of existing 16-inch water main with new 24-inch diameter main from the intersection of Skibo Road to Waters Edge Drive. The improvements are necessary to improve the operation of the School Road re-pump facility. Easement acquisition and engineering design was initiated in FY20 with construction set for FY21 and FY22.

## PROJECT DESCRIPTION & JUSTIFICATION

This project would replace approximately 2,300 LF of 6-inch cast iron water main on Hillsboro Street from Rowan Street to Cumberland Street. The existing water main is approximately five (5) feet off of the existing Norfolk Southern Railway tracks. Failure of this main could cause significant damage to Norfolk Southern's infrastructure. The existing water main is unlined and needs to be replaced in a new location to facilitate operations and maintenance. Engineering is expected to begin in FY24 with construction starting in FY25.

## PROJECT DESCRIPTION & JUSTIFICATION

This project will construct water system improvements along the HWY 401 North corridor in Cumberland County beginning at the termination point of the existing 16-inch transmission main near the intersection of Ramsey Street and Bienville Drive and extending north to the intersection and then west along Elliot Bridge Road. The project will include 10,000 feet of water main improvements (Contract 1 - CPR1000323) a booster pump station (Contract 2) and an elevated tank (Contract 3 - CPR1000429). All of these elements are required for a new boosted pressure zone to serve anticipated development in this vicinity. The Contract 2 project to construct the booster pump station was bid in FY20 with construction completed in FY21.

## PROJECT DESCRIPTION & JUSTIFICATION

This project will construct water system improvements along the HWY 401 North corridor in Cumberland County beginning at the termination point of the existing 16-inch transmission main near the intersection of Ramsey Street and Bienville Drive and extending north to the intersection and then west along Elliot Bridge Road. The project will include 10,000 feet of water main improvements (Contract 1 - CPR1000323), a booster pump station (Contract 2 - CPR1000428) and an elevated tank (Contract 3). All of these elements are required for a new boosted pressure zone to serve anticipated development. The schedule for the Contract 3 project to construct the elevated tank is subject to the pace of development in this new service area. It is anticipated that bids for tank construction will be received in FY21 with construction completing in FY22.

## PROJECT DESCRIPTION & JUSTIFICATION

This project will improve the transmission system in the High Pressure Zone. The work includes 11,500 feet of new 30-inch water main beginning at the Wilson Street elevated tank and continuing along Woodrow Street, Morganton Road, John Street, Rush Road, Mirror Lake Drive, Westview Drive, Westhaven Drive and continue cross country to Fairfield Road ending at the proposed 30-inch main along Raeford Road. This project will improve system pressures during peak demand periods and aid in the turnover of the Wilson Street elevated tank.

## PROJECT DESCRIPTION & JUSTIFICATION

This project would install approximately 2,500 LF of new 8-inch water mains in order to eliminate several dead-end mains within the Kings Grant subdivision. Elimination of the dead-ends will increase fire flows, reduce taste and odor complaints and enhance system reliability. Design is expected to start in FY24 and construction should start in FY26.

## PROJECT DESCRIPTION & JUSTIFICATION

The project will replace approximately 8,000 LF of 6-inch and 8-inch water mains on Gillespie Street between Franklin Street and Southern Avenue. These mains were installed in the late 1940's and recent pipe coupons have indicated that they are unlined and losing wall thickness to tuberculation. Their condition makes them unsuitable for lining. Replacement is expected to be via a trenchless technology to minimize disruption and expedite construction. Engineering is expected to start in FY23 and the project is expected to be completed in FY26.

## PROJECT DESCRIPTION & JUSTIFICATION

The existing instrumentation and control equipment that provides for automated operation of the filters (12 total) at the Glenville Lake Water Treatment Facility is outdated. This project will upgrade that equipment to current industry standards. The scope of work also includes miscellaneous mechanical and chemical feed improvements aimed at improving operational reliability. Although initially conceived as a stand-alone project, the work will be bid as part of the PO Hoffer WTP / Glenville Lake WTP Reliability project (see WS 25) which will result in greater competition and hence lower construction costs.

BID DATE			BUDGET CODE	
START CONSTRUCTION DATE			CPR1000231	
EXPECTED COMPLETION DATE				

## PROJECT DESCRIPTION & JUSTIFICATION

The total combined system treatment capacity of the PO Hoffer WTP and the Glenville Lake WTP is 50 MGD. The annual peak-day demand is approaching 80% of that system total which is the typical benchmark point for initiating design of additional capacity. Phases 1A and 1B, expansion to the POHWTP, focused on reliability and did not add treatment capacity. Design Phase 2, expansion of the liquids process infrastructure, was completed in FY19. System demand has not increased according to previous projections; therefore, the target bid date for the Phase 2 - Expansion has been deferred to 2025.

## PROJECT DESCRIPTION & JUSTIFICATION

The total combined system treatment capacity of the PO Hoffer WTP and the Glenville Lake WTP is 50 MGD. The annual peak-day demand is approaching 80% of that system total which is the typical benchmark point for initiating design of additional capacity. Phases 1A and 1B that focused on reliability and did not add treatment capacity are complete. The Design of the Phase 2 project addressing expansion of the liquids process infrastructure was completed in FY19. System demand has not increased as anticipated hence bidding of the Phase 2 project has been deferred. Design of the Phase 3 project for the residuals handling facilities commenced in FY20. Phase 3 project construction will be in advance of the Phase 2 liquids treatment expansion with construction to begin in FY24.

## PROJECT DESCRIPTION & JUSTIFICATION

The existing standby power generator at the PO Hoffer WTP, installed circa 2000, is reaching the end of its useful life. This project will replace that equipment with a new standby power generator and switchgear complete with Tier 4 engines that will allow for "peak shaving" operation. Engineering for preparation of "design / build" construction documents for soliciting bids and project construction will be completed in FY22.

## PROJECT DESCRIPTION & JUSTIFICATION

Phases 1A and 1B, of the POHWTP Expansion project focused on reliability and did not add treatment capacity. Design of Phase 2 addressed expansion of the liquids process infrastructure and was completed in FY19. System demand has not increased consistent with previous projections; therefore, the target bid date for the Phase 2 - Expansion has been deferred to 2025. This "Reliability" project will address components of the Phase 2 design not associated with treatment expansion that are critical from the standpoint of operational reliability and should not be deferred. The scope of work will also address similar upgrades at the Glenville Lake WTP to include chemical feed and filter control improvements. The project will be submitted for SRF Drinking Water Loan funding in the spring of FY20.

## PROJECT DESCRIPTION & JUSTIFICATION

The City of Fayetteville is planning various storm drainage improvement projects throughout the City during the upcoming years. These projects will impact areas containing PWC water utilities. PWC staff and City staff coordinate the planning and design of these projects and work to avoid conflicts where possible. Where these conflicts are unavoidable, the City incorporates the necessary utility adjustments into their contracts and the associated costs are paid by PWC. There are situations where PWC determines that, due to aging infrastructure or operational issues, utility improvements are necessary. These improvements are the financial responsibility of PWC as well. See WS 90 - CPR1000141 for the sewer portion of this project.

## PROJECT DESCRIPTION & JUSTIFICATION

Hurricane Matthew damaged multiple PWC water mains causing the need for them to be replaced. These damages occurred at washouts on various NCDOT and City of Fayetteville roads and culverts. Known areas include Bingham Drive, Shawcroft Road, Mirror Lake Drive, Sykes Pond, and Devonwood Lower. These projects are to be submitted to FEMA for partial reimbursement.

## PROJECT DESCRIPTION & JUSTIFICATION

This project will install approximately 10,000 linear feet of new 16-inch water main in conjunction with the NCDOT roadway improvements for NC 59 (South Main Street) between Parkton Road and US 301. Extension of the new water main is necessary to provide additional supply to the Town of Hope Mills, as well as, future development in this area. Construction is anticipated to begin in FY23 and be completed in FY25. An agreement with NCDOT is not in place at this time. However, billing is expected upon completion of all road work and is anticipated to be made in one final payment. Project includes the installation of approximately 9,000 linear feet of water mains outside the NCDOT project limits in order to connect to PWC's existing system.

## PROJECT DESCRIPTION & JUSTIFICATION

This project will relocate water mains as necessary to eliminate conflicts with the proposed NCDOT roadway construction. The new roadway work will be from Hampton Oaks Drive to Fairway Drive along Raeford Road. Construction of the utility improvements will be included in the NCDOT construction contracts. NCDOT has decided to separate the project into three (3) phases. Reimbursement for this work to NCDOT will be made at the end of the individual phases. Completion of Phase 3 is anticipated to be in FY28. See WS 103 - CPR1000268 for the sewer portion of this project.

## PROJECT DESCRIPTION & JUSTIFICATION

This project will relocate portions of existing 16" and 12" water mains in conflict with NCDOT's roadway improvements for the proposed Outer Loop where it intersects Century Circle, Strickland Bridge Road and Stoney Point Road. This project will include the extension of water mains to serve a portion of Phase V Annexation Area 32. Construction is expected to begin in FY21 and be completed in FY24. An agreement with NCDOT is not in place at this time. However billing is expected upon completion of all highway work and to be made in one final payment. Total construction cost is estimated at \$5,727,000. See WS 94 - CPR1000350 for the sewer portion of this project.

## PROJECT DESCRIPTION & JUSTIFICATION

NCDOT plans to widen Ramsey Street from the I-295 Fayetteville Outer Loop to US 401 Business (MLK). PWC has extensive water and sewer facilities in this corridor. These lines may be in conflict with NCDOT's proposed facilities and may be relocated. NCDOT plans to start construction in year 2023. PWC is anticipating this project to impact the majority of the water and sewer lines along Ramsey Street. See WS 95 - CPR1000312 for the sewer portion of this NCDOT project.

## PROJECT DESCRIPTION & JUSTIFICATION

NCDOT plans to widen Cliffdale Road from McPherson Church Road to Morganton Road. There is a 36" water main that serves Cliffdale Road Elevated Water Storage Tank and various smaller diameter water and gravity sewer mains in this corridor. These lines may be in conflict with NCDOT's proposed facilities and may be relocated. NCDOT plans to go to ROW in May 2022 and start construction in year 2024. PWC has estimated 25% of the water and sewer lines will be relocated as part of this project. Construction of the utility improvements will be included in the NCDOT construction contract. Reimbursement for this work to NCDOT will be made at the end of the project. See WS 96 - CPR1000313 for the sewer portion of this NCDOT project

## PROJECT DESCRIPTION & JUSTIFICATION

NCDOT plans to widen Murchison Rd. from the I-295 Fayetteville Outer Loop to the US 401 Bypass. There is a 24" water main that serves Fort Bragg and various smaller diameter water mains in this corridor. These lines may be in conflict with NCDOT's proposed facilities and may be relocated. NCDOT plans to go to ROW in May 2022 and to start construction in year 2024. PWC has estimated 50% of the water lines will be relocated as part of this project. Construction of the utility improvements will be included in the NCDOT Construction contract. Reimbursement for this work to NCDOT will be made at the end of the project. See WS 97 - CPR1000314 for the sewer portion of this NCDOT project.

## PROJECT DESCRIPTION & JUSTIFICATION

NCDOT plans to widen Shaw Road, Shaw Mill Road, Rosehill Road and Stacey Weaver Drive from Murchison Road to Ramsey Street. There is approximately 8,100 LF of 16" AC water main and 6,500 LF of 12" AC water main that is anticipated to be replaced as part of this project. There are also various small diameter water and sewer mains throughout the project corridor. These lines may be in conflict with NCDOT's proposed facilities and may be relocated. NCDOT plans to go to ROW in FY23 and start construction beyond the current TIP schedule. See WS 98 - CPR1000315 for the sewer portion of this NCDOT project.

## PROJECT DESCRIPTION & JUSTIFICATION

NCDOT plans to widen Gillis Hill Road from US HWY 401 Raeford Road to Lindsey Road in Hoke County. There is a 16" water main serving the Hoke County Water Booster Pump Station and gravity sewer mains in this corridor. These lines may be in conflict with NCDOT's proposed facilities and may be relocated. NCDOT is proposing to replace the bridge and approximately 6,000 LF of road widening in the first phase of the project scheduled for ROW in May 2020 with construction starting in 2021. The second phase (U-5798B) includes approximately 3,500 LF of road widening is scheduled for ROW in February 2021 and to start construction in 2023. This project is for U-5798A which includes the section from Raeford Road to Stoney Point Road. See WS 99 - CPR1000316 for the sewer portion of this project.

## PROJECT DESCRIPTION & JUSTIFICATION

NCDOT plans to widen Camden Road from NC59 Hope Mills Road to the new I-295 Fayetteville Outer Loop. There is a 16" water main, a 12" water main and some intermittent small diameter water/sewer mains in this corridor which will be in conflict with NCDOT's proposed facilities requiring relocation. Due to the extent of NCDOT's widening project, parallel water mains will need to be installed to service customers on both sides of Camden Road. NCDOT plans to go to ROW in October 2020 and start construction in year 2022. PWC has estimated 100% of the water and sewer lines will be relocated as part of this project. Construction will be included in the NCDOT construction contract. Reimbursement for this work to NCDOT will be made at the end of the project. See WS 101 - CPR1000317 for the sewer portion of this NCDOT project.

NCDOT U-2519A A/AB - Fayetteville Outer Loop from South of SR 1003 (Camden Rd) to I-95S in Robeson County - Water			Medium	New X
<b>BID DATE</b>	11/21/2017		Low	Renovation
<b>START CONSTRUCTION DATE</b>	1/2/2018		<b>BUDGET CODE</b>	
<b>EXPECTED COMPLETION DATE</b>	7/31/2021		CPR1000400	

## PROJECT DESCRIPTION & JUSTIFICATION

This project will extend an 8-inch water main off of Black's Bridge Road where the proposed Fayetteville Outer Loop corridor is cutting off access to several properties. There will also be a replacement of an existing 8-inch water main along Waldo's Beach Road where it is in conflict with the proposed roadway alignment. Construction is expected to begin in FY18 and be completed in FY22. An agreement with NCDOT is not in place at this time. However, billing is expected upon completion of all highway work and to be made in one final payment. Total construction cost is estimated at \$581,000.

## PROJECT DESCRIPTION & JUSTIFICATION

This project will involve the adjustment of water mains that are in conflict with the proposed widening of the All American Freeway to add an additional lane in each direction. Right of way acquisition will begin in FY22 and construction is to begin in FY25. Construction to be complete in FY28. See WS 104 - CPR1000404 for the sewer portion of this project.

## PROJECT DESCRIPTION & JUSTIFICATION

This project will relocate approximately 10,000 linear feet of existing 8-inch and 12-inch water mains in conflict with NCDOT's roadway improvements for Rockfish Road between Golfview Drive and NC 59. The existing 12-inch water main must be replaced as it is asbestos-cement (AC) pipe and NCDOT does not allow AC pipes under the road. Parallel mains will be installed. Construction is anticipated to begin in FY23 and be completed in FY25. An agreement with NCDOT is not in place at this time. However, billing is expected upon completion of all road work and is anticipated to be made in one final payment. See WS #105 - CPR1000398 for the sewer portion of this project.

## PROJECT DESCRIPTION & JUSTIFICATION

This project includes the installation of new sewer services and new main extensions by PWC and/or contractor forces to serve new customers. This project also includes the installation of parallel mains where needed. This project will add new customer base and provide system growth. An estimated 50 new customers will be added each year. Revenue is based on 50 new customers times the connection fee of \$6,994 and 50 customers times the average bill of \$36.70 times 12 months.

## PROJECT DESCRIPTION & JUSTIFICATION

This project will replace existing sewer laterals that have reached or exceeded their life expectancy and are not cost effective to repair. Renewing services defers or reduces operating maintenance costs and reduces inflow and infiltration into the collection system. This work is also coordinated with NCDOT and City Street Resurfacing and Streetscape projects to avoid cutting pavement in streets that have been recently resurfaced.

## PROJECT DESCRIPTION & JUSTIFICATION

The project involves the rehabilitation of various lift station wet wells utilizing an epoxy coating. The wet wells are suffering from severe deterioration caused by hydrogen sulfide damage and resulting in need for rehabilitation. This work is necessary to maintain the integrity of the lift stations.

## PROJECT DESCRIPTION & JUSTIFICATION

This project will include labor and materials to rehabilitate deteriorated sanitary sewer manholes at various locations in the PWC collection system by contract. No new customers will be gained by this work. This work is needed to maintain the integrity of PWC's system. The budget will increase in order to rehabilitate or replace 1% of the system in accordance with the asset management plan.

## PROJECT DESCRIPTION & JUSTIFICATION

This project would line approximately 4,000 LF of 54-inch concrete outfall, from Research Drive to Interstate 95. Recent CCTV inspections indicate that this section of outfall has hydrogen sulfide damage and is in need of rehabilitation. There are several sections of this outfall that have exposed rebar. Failure of this outfall would result in significant construction, environmental and social costs. This project is the second of several that will rehabilitate the 54-inch outfall from US 301 to the Rockfish Creek Water Reclamation Facility. This is Project #15 in the Annual Rehabilitation Update Report.

## PROJECT DESCRIPTION & JUSTIFICATION

This project will construct improvements necessary to relieve portions of the Rockfish Creek Basin interceptor system susceptible to surcharging and potential overflows during periods of extreme wet weather. The first phase of engineering completed in FY11 confirmed the location of collection system bottlenecks. The second phase of engineering started in FY17 and provided the updated basis of design for a 3.5 MG offline Equalization and Pumping Facility located near the junction of the existing 36" and 42" interceptor mains north of Camden Road and west of George Owen Road. This project has been selected to be funded by the NCDEQ State Revolving Loan Program.

## PROJECT DESCRIPTION & JUSTIFICATION

This project will replace approximately 1,800 linear feet of 8-inch HDPE-lined concrete sewer mains. Replacement of these mains will reduce the likelihood of future sewer spills and facilitate maintenance activities. Engineering was started in FY 2018 and the project is expected to be completed in FY 2022.

## PROJECT DESCRIPTION & JUSTIFICATION

This project will replace the existing aerial sewer crossing at the end of Kennedy St damaged during Hurricane Matthew. Inspections prior to the hurricane indicated that repairs of the structure would be necessary. Inspections after the hurricane revealed additional damage, necessitating replacement of the structure. It is anticipated that FEMA will reimburse PWC a portion of the total cost. Engineering began in FY18 with construction anticipated to be complete in FY21. This project is necessary to ensure the structural integrity of the crossing and reduce the likelihood of failure.

## PROJECT DESCRIPTION & JUSTIFICATION

This project will provide sewer service to the Construction Areas for Phase V Annexation. These areas were annexed into the City of Fayetteville in 2005. Design for Construction Areas began in FY09. Each fiscal year thereafter the next two consecutive Construction Areas will have sewer installed. Approximately 600 new sewer services will be added each fiscal year. Connection rates are assumed to be 50% first year, 10% second year, and 5% each year after. The assumed revenue per customer is \$36.68 with no escalation of the revenue over time.

## PROJECT DESCRIPTION & JUSTIFICATION

This project will replace the existing 16-inch cast iron aerial sewer crossing off Shadowlawn Drive. This existing crossing consists of concrete piers supporting the 16-inch pipe. The high stream flows during Hurricane Florence caused the piers to become unstable, threatening the integrity of the crossing. This crossing was initially constructed in 1952 and has reached the end of its service life. Replacement is necessary to ensure that no additional damage occurs due to high flow events and to minimize maintenance costs. It is anticipated that FEMA will reimburse PWC for a portion of this cost. Design is anticipated to start in FY 2020 with construction occurring in FY 2022.

## PROJECT DESCRIPTION & JUSTIFICATION

This project will replace the existing 42-inch aerial sanitary sewer crossing near Lamon Street that discharges to the Cross Creek Water Reclamation Facility. This crossing has been damaged and the piers have been undermined multiple times. Inspections prior to Hurricane Matthew and Hurricane Florence indicated that repairs of the structure would be necessary. Inspections after each of the hurricanes revealed additional damages, necessitating replacement of the structure. The size of the sanitary sewer main will be increased as part of this project as well in anticipation for increased future flows. Engineering is planned for FY24 and construction is expected to be completed in FY25.

## PROJECT DESCRIPTION & JUSTIFICATION

This project would line approximately 6,000 LF of 27-inch concrete sewer main from Youngberry Street to Cliffdale Road. This existing outfall runs along and under McFadyen Lake. Recent CCTV inspections have found infiltration and deterioration of the concrete main. Given the location of the main and the difficult access, it is anticipated that this project may be constructed as a design-build or a Construction Manager At Risk (CMAR) project. Design is anticipated to be completed in FY 2025 with construction starting in FY 2026.

## PROJECT DESCRIPTION & JUSTIFICATION

This project will line approximately 5,400 LF of 21-inch and 24-inch clay sewer main between Milan Road and Gale Street. Recent CCTV inspections have indicated significant defects within this section of the outfall. This outfall serves a large portion of central and northern Fayetteville. Failure of this main would result in significant construction, social, and environmental costs.

## PROJECT DESCRIPTION & JUSTIFICATION

This project consists of replacing the existing 21-inch and 8-inch sewer mains with 24-inch and 12-inch sewer mains. This project is necessary to convey the peak wet weather flows in this drainage basin. Further, the existing sewer mains are vitrified clay, and nearing the end of their service life. Approximately 4,900 LF of 24-inch and 1,800 LF of 12-inch sewer mains will be installed. This project was identified and recommended in the 2008 Cross Creek Sanitary Sewer Master Plan.

## PROJECT DESCRIPTION & JUSTIFICATION

This project involves the replacement of approximately 3,700 linear feet of 8-inch High-Density Polyethylene Pipe (HDPE)-lined vitrified clay sewer mains with new 12-inch sewer mains, and replace approximately 1,750 linear feet of 8-inch and 10-inch sewer mains with new 12-inch Ductile Iron pipe sewer mains. Replacement of the 8-inch HDPE-lined mains will reduce the likelihood of future sewer spills and facilitate maintenance activities. Replacement of the 8-inch and 10-inch sewer main is necessary to convey the peak wet weather flows in this drainage basin. This project was initially identified in the 2008 Cross Creek Sanitary Sewer Master Plan. Recent flow monitoring and modeling confirmed that the existing lines were unable to convey the peak wet weather flows.

## PROJECT DESCRIPTION & JUSTIFICATION

The project will replace approximately 2,600 LF of 8-inch and 12-inch vitrified clay sewer mains between Cliffdale Road and Murray Hill Road. This section of sewer has parallel mains, exposed pipe in Branson Creek, reverse slopes, and limited capacity during wet weather events. This project will replace the existing mains with a new 12-inch main. The condition of the mains make them unsuitable for lining. Engineering is expected to start in FY22, and the project is expected to be completed in FY25.

## PROJECT DESCRIPTION & JUSTIFICATION

The project will replace approximately 4,000 LF of 15-inch concrete sewer main between Murray Hill Road and Fairfield Road. This section of sewer has exposed pipe in Branson Creek and limited capacity during wet weather events. This project will replace the existing main with a new 16-inch main. The condition of the main makes it unsuitable for lining. Engineering is expected to start in FY24 and the project is expected to be completed in FY27.

## PROJECT DESCRIPTION & JUSTIFICATION

This project would relocate approximately 2,000 LF of 36-inch concrete sewer outfall between Greensboro Street and Hillsboro Street. During easement negotiations for the rehabilitation of the Cross Creek Outfall, it was discovered that PWC has an existing 10-foot wide easement through the middle of 601 Hillsboro Street. This easement restricts PWC's ability to perform operation and maintenance on the sewer main and the property owner was not willing to renegotiate the easement. It was determined that installing a new sewer outfall along the perimeter of 601 Hillsboro was the most feasible option for PWC. Design is expected to be completed in FY21 with construction starting in FY22.

## PROJECT DESCRIPTION & JUSTIFICATION

This project would line approximately 4,800 LF of 42-inch concrete outfall from Blairwood Drive to Mango Circle. Recent CCTV inspections indicate that this section of outfall has hydrogen sulfide damage and is in need of rehabilitation. Further modeling, based on flow monitor data, indicates that this section of outfall has a significant amount of groundwater infiltration. Failure of this outfall would result in significant construction, environmental and social costs. This is Project #11 in the Annual Rehabilitation Update Report.

## PROJECT DESCRIPTION & JUSTIFICATION

This project will line approximately 3,500 LF of the Beaver Creek Outfall from the Hope Mills Bypass (NC 162) to Bloomsbury Drive. This outfall is 42-inch concrete pipe serving a large area west of Hope Mills Road. Failure of this main would result in significant construction, environmental, and social costs. A video inspection of the main indicates that deterioration and infiltration is occurring. Rehabilitation is necessary to maintain its integrity.

## PROJECT DESCRIPTION & JUSTIFICATION

This project will line approximately 3,200 LF of 54-inch concrete outfall from Interstate 95 to Claude Lee Road. Recent CCTV inspections indicate that this section of outfall has hydrogen sulfide damage resulting in the need for rehabilitation. There are several sections of this outfall that have exposed rebar. Failure of this outfall would result in significant construction, environmental and social costs. This project is the third of several that will rehabilitate the 54-inch outfall from US 301 to the Rockfish Creek Water Reclamation Facility. This is Project #16 in the Annual Rehabilitation Update Report.

## PROJECT DESCRIPTION & JUSTIFICATION

This project will construct a new 24"-18" sanitary sewer outfall along Big Rockfish Creek and Stewart's Creek at the Cumberland/Hoke County line. This area is expected to see an increase in new development and sewer customers due to the planned I-295 Fayetteville Outer Loop and Annexation Areas 32 and 34. The proposed Outfall will eliminate the need for a future lift station to serve the Annexation Areas. This project has been approved for funding through the Clean Water State Revolving Fund (CWSRF).

## PROJECT DESCRIPTION & JUSTIFICATION

This project will line approximately 15,000 LF of 8, 12, 15, and 18-inch sewer mains within the Mintz Pond - Kornbow Lake watershed area. Recent CCTV inspections have indicated serious defects within many sections of the sewer mains. These mains are within PWC's Watershed area and completing rehabilitation will ensure their integrity and minimize the risk of a sanitary sewer overflow.

## PROJECT DESCRIPTION & JUSTIFICATION

This project involves replacement of the electrical and mechanical controls at the East Fayetteville Lift Station and Cargill Lift Station. Both LSs were constructed in the 1980's; replacement parts for the electrical and mechanical controls are becoming obsolete. Additionally, PWC will look at upgrading to variable frequency drives to allow for smoother starts and stops reducing stresses on the force mains and associated piping. The Cargill LS controls are subject to flooding which will be raised as part of this project. A preliminary engineering report will be completed for each lift station in order to review options and determine a final design. This work is necessary to facilitate operation and maintenance of the lift stations.

## PROJECT DESCRIPTION & JUSTIFICATION

The electrical and mechanical controls at the N. Fayetteville Lift Station (LS #48) are 30 years old, and it is becoming difficult to find replacement parts. Currently, PWC is completing a preliminary evaluation of various pumps, controls, and other possible upgrades. Once the study is completed, the design of the selected option(s) will begin. It is anticipated that the design will be completed in FY21, and construction of the upgrades will occur in FY22. This project will install mechanical and electrical upgrades that are needed to efficiently operate and maintain the lift station, as well as to serve the expected growth in the North Fayetteville area.

## PROJECT DESCRIPTION & JUSTIFICATION

This project will address reliability of the Cross Creek WRF by implementing improvements to both the liquid and residual treatment processes. Existing equipment that is approaching the end of its useful life will be replaced. The project will not expand treatment capacity.

## PROJECT DESCRIPTION & JUSTIFICATION

The existing standby power generator at the Rockfish Creek WRF, installed circa 2006, is reaching the end of its useful life. This project will replace that equipment with a new standby power generator and switchgear complete with Tier 4 engines that will allow for "peak shaving" operation. Engineering for preparation of "design / build" construction documents for soliciting bids and project construction will be completed in FY22.

## PROJECT DESCRIPTION & JUSTIFICATION

The Rockfish Creek WRF is currently permitted for 21.0 MGD capacity. The current average daily flow (ADF) rate is approaching 15 MGD. Design for expansion is typically initiated when the ADF approaches 80% of the permitted treatment capacity which is 16.80 MGD. A Preliminary Engineering Report addressing the Phase 3 Expansion of the Rockfish Creek WRF was completed in FY20. Design will be initiated in FY22 with construction to follow in subsequent years.

## PROJECT DESCRIPTION & JUSTIFICATION

Existing fine screens at the Rockfish Creek WRF headworks facilities are located immediately downstream from the Influent Pump Station screw pumps. This equipment requires excessive maintenance and downtime. The extreme wear has accelerated the useful life of this equipment. This project will replace those existing fine screens with equipment better suited for this rigorous application. Work on the Preliminary Engineering Report (PER) in FY19 revealed issues with the slide gates isolating the downstream grit chamber facility. Hence, the scope of the project has been expanded to include grit chamber improvements. The PER was complete in FY19 with detailed design initiated in FY20. Construction is scheduled for FY21 and FY22.

## PROJECT DESCRIPTION & JUSTIFICATION

There are four (4) screw pumps at the Rockfish Creek Influent Pump Station that were installed circa 2005. All four are approaching the end of their useful life due largely to the corrosive wastewater environment typical of the facility headworks. This project will remove and replace Screw Pumps #1 and #2. Procurement will commence in FY22 with construction in FY23.

## PROJECT DESCRIPTION & JUSTIFICATION

This project will upgrade the existing Longview Lift Station and Force Main. The lift station currently operates at about 90% of capacity. The station is located just south of Methodist University, east of Ramsey Street. This area is expected to have continued growth. This service area includes Annexation Areas 30 & 31 which are scheduled to begin construction in 2023. This service area also includes at least one known development for a new shopping center. A project Preliminary Engineering Report was completed in FY19 with detailed design slated for FY20 and FY21. Construction will begin in FY22 and wrap up in FY23.

## PROJECT DESCRIPTION & JUSTIFICATION

Hurricane Matthew damaged multiple PWC sewer mains causing the need for them to be replaced. These damages occurred at washouts on various NCDOT and City of Fayetteville roads and culverts, as well as multiple aerial crossing locations. Known areas include Sweetbay Drive, Bramblegate Road, Bingham Drive, Ann Street and Mirror Lake Dam. These projects are to be submitted to FEMA for partial reimbursements.

## PROJECT DESCRIPTION & JUSTIFICATION

The City of Fayetteville is planning various storm drainage improvement projects throughout the City during the upcoming years. These projects will impact areas containing PWC sewer utilities. PWC staff and City staff coordinate the planning and design of these projects and work to avoid conflicts where possible. Where these conflicts are unavoidable, the City incorporates the necessary utility adjustments into their contracts and the associated costs are paid by PWC. There are situations where PWC determines that, due to aging infrastructure or operational issues, utility improvements are necessary. These improvements are the financial responsibility of PWC as well. See WS 26 - CPR1000096 for the water portion of this project.

## PROJECT DESCRIPTION & JUSTIFICATION

NCDOT plans to widen Fisher Road from Strickland Bridge Road to NC 162. There are various water and sewer mains throughout the project corridor. These lines may be in conflict with NCDOT's proposed facilities and may be relocated. NCDOT plans to go to ROW in FY25 and start construction beyond the current TIP schedule. See WS 32 - CPR1000372 for the water portion of this NCDOT project.

## PROJECT DESCRIPTION & JUSTIFICATION

This project will extend gravity sanitary sewer to serve a portion of Phase V Annexation Construction Area 32 that is affected by the proposed Fayetteville Outer Loop corridor. A portion of the sanitary sewer main for the Big Rockfish Outfall Project will also be installed as part of this project. Construction is expected to begin in FY21 and be completed in FY24. An agreement with NCDOT is not in place at this time. However, billing is expected upon completion of all highway work and to be made in one final payment. Total construction cost is estimated at \$751,000. See WS 34 - CPR1000348 for the water portion of this project.

## PROJECT DESCRIPTION & JUSTIFICATION

NCDOT plans to widen Ramsey Street from the I-295 Fayetteville Outer Loop to US 401 Business (MLK). PWC has extensive water and sewer facilities in this corridor. These lines may be in conflict with NCDOT's proposed facilities and may be relocated. NCDOT plans to start construction in year 2025. PWC is anticipating this project to impact the majority of the water and sewer lines along Ramsey Street. See WS 35 - CPR1000293 for the water portion of this NCDOT project.

## PROJECT DESCRIPTION & JUSTIFICATION

NCDOT plans to widen Cliffdale Road from McPherson Church Road to Morganton Road. There are various gravity sewer mains in this corridor. These lines may be in conflict with NCDOT's proposed facilities and may be relocated. NCDOT plans to go to ROW in May 2022 and start construction in 2024. PWC has estimated 25% of the sewer lines will be relocated as part of this project. Construction of the utility improvements will be included in the NCDOT Construction contract. Reimbursement for this work to NCDOT will be made at the end of the project. See WS 36 - CPR1000294 for the water portion of this project.

## PROJECT DESCRIPTION & JUSTIFICATION

NCDOT plans to widen Gillis Hill Road from US HWY 401 Raeford Road to Lindsey Road in Hoke County. There is a 16" water main serving the Hoke County Water Booster Pump Station and gravity sewer mains in this corridor. These lines may be in conflict with NCDOT's proposed facilities and may be relocated. NCDOT is proposing to replace the bridge and approximately 6,000 LF of road widening in the first phase of the project scheduled for ROW in May 2020 and to start construction in 2021. This project is for U-5798A which includes the section from Raeford Road to Stoney Point Road. See WS 39 - CPR1000308 for the water portion of this project.

## PROJECT DESCRIPTION & JUSTIFICATION

NCDOT plans to widen Gillis Hill Road from US HWY 401 Raeford Road to Lindsey Road in Hoke County. There is a 16" water main serving the Hoke County Water Booster Pump Station and gravity sewer mains in this corridor. These lines may be in conflict with NCDOT's proposed facilities and may be relocated. The second phase (U-5798B) includes approximately 3,500 LF of road widening and is scheduled for ROW in February 2021 with construction starting in 2023. The portion of sewer to be constructed in the second U-5798B phase is needed to serve Annexation Phase V. This project is for U-5798B which includes the section from Stoney Point Road to Lindsay Road. See WS 40 - CPR1000478 for the water portion of this project.

## PROJECT DESCRIPTION & JUSTIFICATION

NCDOT plans to widen Camden Road from NC 59 to the new I-295 Fayetteville Outer Loop. There are some intermittent small diameter sewer mains in this corridor. These lines will be in conflict with NCDOT's proposed facilities and will need to be relocated. NCDOT plans to go to ROW in March 2019 and start construction in 2021. PWC has estimated 100% of the sewer lines will be relocated as part of this project. Construction of the utility improvements will be included in the NCDOT Construction contract. Reimbursement for this work to NCDOT will be made at the end of the project. See WS 41 - CPR1000309 for the water portion of this NCDOT project.

## PROJECT DESCRIPTION & JUSTIFICATION

This project will relocate water mains as necessary to eliminate conflicts with the proposed NCDOT roadway construction. The new roadway work will be from Hampton Oaks Drive to Fairway Drive along Raeford Road. Construction of the utility improvements will be included in the NCDOT construction contracts. NCDOT has decided to separate the project in three (3) phases. Reimbursement for this work to NCDOT will be made at the end of the individual phases. Completion of Phase 3 is anticipated to occur in FY 2028. See WS 33 CPR1000267 for the water portion of this project.

## PROJECT DESCRIPTION & JUSTIFICATION

This project will relocate approximately 2,000 linear feet of existing 8-inch sewer mains in conflict with NCDOT's roadway improvements for Rockfish Road, between Golfview Drive and NC 59. Construction is anticipated to begin in FY23 and be completed in FY25. An agreement with NCDOT is not in place at this time. However, billing is expected upon completion of all road work and is anticipated to be made in one final payment. See WS 44 - CPR1000399 for the water portion of this project.

## PROJECT DESCRIPTION & JUSTIFICATION

The existing standby power generator at the Rockfish Creek WRF installed circa 2006 failed in FY20. This project will replace that equipment with a new standby power generator and switchgear complete with Tier 4 engines that will allow for future "peak shaving" operation. Engineering associated with preparation of "design / build" construction documents for soliciting bids will be completed in FY20 with bidding and construction in FY21.

## PROJECT DESCRIPTION & JUSTIFICATION

This ongoing project is to modify and extend the distribution system primary facilities to accommodate planned urban development requiring underground utilities. This project will install conduit, sectionalizing, primary cable, secondary, services, street lights, and transformation equipment as required to meet the development's plan for electric utility connectivity. This effort is being performed in conjunction with the City of Fayetteville's Unified Development Ordinance.

## PROJECT DESCRIPTION & JUSTIFICATION

The purpose of this project is to modify and extend overhead distribution system and service facilities to accommodate and serve new customers and to serve the increased needs of existing customers. New and existing customers in overhead service areas will require connections to the distribution system or improvements in their existing service connections to serve increased electrical loads.

## PROJECT DESCRIPTION & JUSTIFICATION

This project contains funds for the installation of poles, conductors, LED fixtures, and other hardware needed to provide dusk-to-dawn lighting service. This service is offered under Commission-approved rates and regulations and is available for installation. The installation of this infrastructure is at the customer's request and provides for security lighting at residences, high-density dwellings, and at commercial facilities.

## PROJECT DESCRIPTION & JUSTIFICATION

This project includes the purchase of single phase 7.2 kV x 14.4 kV pad mounted distribution transformers from 25 kVA through 167 kVA and three phase 12 x 25 and 25 kV pad mounted and vault transformers from 150 to 2500 kVA. Underground distribution transformers will continue to be purchased to serve new loads, replace failed transformers, provide increased capacity where needed, and facilitate conversion of primary voltage to customer's utilization voltage. It is anticipated that the Department of Energy will be enforcing higher efficiency standards that will have a direct impact on the first cost of these units.

## PROJECT DESCRIPTION & JUSTIFICATION

The purpose of this project is to purchase single phase 7.2 kV, 13.2 kV, and 14.4 kV pole and platform mounted distribution transformers from 10 kVA through 333 kVA. Overhead distribution transformers will continue to be purchased to serve new loads, replace failed transformers, provide increased capacity where needed, and facilitate conversion of primary voltage to customer's utilization voltage. It is anticipated that the Department of Energy will be enforcing higher efficiency standards that will have a direct impact on the first cost of these units.

## PROJECT DESCRIPTION & JUSTIFICATION

This ongoing project replaces existing direct-buried solid dielectric primary cable system in residential subdivisions with high incidences of primary cable failures. This project will install new primary cable, conduit as needed, add sectionalizing as needed, replace subsurface transformers as needed and complete related work as required. The cable system will be installed using open trench where practical and using directional boring where needed.

## PROJECT DESCRIPTION & JUSTIFICATION

This project contains funds to maintain the existing commercial and residential underground distribution facilities. PWC owns and operates 519 cable miles of underground distribution primary circuits. It provides for preventive maintenance and routine location and inspection of conductors, terminations, sectionalizing devices, and conduit/vault installations. This activity is crucial in minimizing service interruptions to underground customers and facilities. Inspection of PWC's underground distribution facilities began in FY08. As risks are identified, PWC will need to address these violations on a systematic basis based on the risk assessment matrix.

## PROJECT DESCRIPTION & JUSTIFICATION

This project replaces existing direct-buried solid dielectric primary feeder cable from the substation bus to the first riser pole (UG-OH transition point) outside the substation fence. The cross-linked polyethylene (XLP) cable at the various substations is over 25 years old and has been subject to multiple feeder faults. These cables are at the end of their useful service life and have been spliced repeatedly due to cable failures and dig-ins. In FY18 and FY19, PWC tested 50% of the substations for electrical cable integrity and to rank cables for replacement. During 2020, PWC will test 30% of the remaining substation feeder cables to determine condition. This project will install conduit in open cut trenches as needed and complete related work as required. Construction will be performed by an electric utility contractor.

## PROJECT DESCRIPTION & JUSTIFICATION

This project will upgrade existing circuits by increasing thermal capabilities, replace existing conductors or construct new circuits as needed for distribution system improvement as indicated by the annual Area Planning Study. This study identified system components that have reached the limits of their thermal or operational capacity or will reach these limits during the study period. Improvements in the distribution system are then identified and included in the study's system model.

## PROJECT DESCRIPTION & JUSTIFICATION

This project will install three-phase and single-phase Smart Grid compatible electronic reclosers as necessary to reduce outages due to momentary interruptions on branch circuits caused by animals and intermittent tree contact. These devices will reduce the impact from thru- faults to our power transformers by utilizing a pulse closing technique and will enable PWC to extend the life of its aging power transformer infrastructure.

## PROJECT DESCRIPTION & JUSTIFICATION

This project contains funds to maintain the existing overhead transmission, sub-transmission, and distribution facilities. PWC owns and operates 2918 miles of overhead distribution primary circuits and 120 miles of overhead sub-transmission circuits. It provides for the preventive maintenance on twenty percent of these circuits each fiscal year. Routine testing, and inspection of conductors, supporting devices, poles, sectionalizing devices, and right-of-way is included during this process. This activity is crucial in maintaining a high level of service continuity and safety to our customers and facilities.

## PROJECT DESCRIPTION & JUSTIFICATION

This project provides funds for the installation of LED roadway lighting along thoroughfares and major connector streets inside the City limits of Fayetteville that are presently unlit or underlit. Locations for FY21 and FY22 include MLK Expressway from Ramsey Street to Eastern Boulevard and All American Freeway from Owen Drive to Yadkin Road.

## PROJECT DESCRIPTION & JUSTIFICATION

The purpose of this project is to purchase hosted enterprise software and devices to remotely monitor distribution feeder service voltage and to lower system voltage to ANSI limits during monthly coincident peaks with Duke Energy. Studies have shown that for every volt drop on substation bus, the substation demand is reduced by approximately 0.85%. This system should help PWC to reduce its power supply cost and system losses considerably once deployed system-wide.

## PROJECT DESCRIPTION & JUSTIFICATION

The purpose of this project is to install static and remote control shunt capacitor banks on distribution primary circuits as needed for reactive power compensation and conservation voltage reduction (CVR) throughout the distribution system. Anticipated increase in power supply costs from our energy supplier have highlighted the need to reduce our reactive power requirement to an optimum level and to implement CVR where possible to lower our wholesale energy and demand costs. PWC has elected to utilize distributed shunt capacitor banks to meet its reactive power compensation needs and to reduce voltage drops along distribution feeders. We will install static banks where required and switched banks when necessary to reduce system losses, maintain adequate voltage levels, and to optimize distribution feeder operation.

## PROJECT DESCRIPTION & JUSTIFICATION

This project will continue the build-out of PWC's Fiber Optic Network to provide for broadband digital communications to automated sectionalizing devices and remotely controlled capacitor banks. It will also provide for the remote monitoring of intelligent electronic devices (IEDs) strategically placed along PWC's T/D system. This project incorporates both the OSP fiber and network electronics configured in a self-healing ring architecture.

## PROJECT DESCRIPTION & JUSTIFICATION

The purpose of this project is to provide funding for installation of the necessary communications equipment, time-division multiplexors (TDM) and fast ethernet switches, along with the reconfiguration of PWC's existing OSP fiber optic system to create a self-healing communications network that is capable of adequately supporting PWC's current and future Smart Grid communication initiatives. This project will storm-harden PWC's fiber optic (FO) communication system and provide the necessary resiliency to meet the Electric Division's existing and future needs.

## PROJECT DESCRIPTION & JUSTIFICATION

This project will enable PWC to replace its aging sub-transmission wood pole assets with tapered tubular steel products on a systematic basis over a thirty (30) year period. The goal is to virtually eliminate the maintenance costs associated with maintaining these existing assets. Records indicate that 715 (34%) of the 2093 sub-transmission pole assets are over 30 years old. In addition a condition assessment has been performed on PWC's entire transmission plant population. A risk assessment matrix has been developed to determine which poles need to be replaced first. The transmission pole replacement plan identified the need to replace 100 poles per year. The pole replacement program began in FY 2012.

## PROJECT DESCRIPTION & JUSTIFICATION

The purpose of this project is to provide for the timely replacement of twelve power circuit breakers each year for the next ten years. PWC's aging breaker population continues to pose reliability problems for system operations. The age range of distribution circuit breakers varies from 36 years old to 2 years old. The majority of vacuum circuit breakers purchased by PWC are on the order of 22 years old. A significant population of units is of a vintage where replacement parts are extremely hard to acquire and are extremely expensive. This project will begin the annual replacement of the oldest, most problematic units first. Additionally, this project will enable PWC to begin to utilize the IED technology currently available for use in substation environments. The purpose of this technology deployment will be to improve system reliability.

## PROJECT DESCRIPTION & JUSTIFICATION

The purpose of this project is to replace vintage 69 kV switches and upgrade to Ethernet fiber optic communication systems for automation. PWC currently has 88 switches that were installed on our system prior to 1995. These switches are problematic from an operational perspective and are not capable of being operated remotely. System outages at this voltage generally affect a significant amount of our electrical utility customers which has a negative impact on our reliability levels. This project will fund the replacement of approximately nine (9) switches per year over a ten (10) year period and will be performed in tandem with the multi-year sub-transmission pole replacement program.

## PROJECT DESCRIPTION & JUSTIFICATION

This capital project contains funds to replace failed equipment in any of PWC's thirty (30) T-D substations. Projects identified include: battery and/or dc system replacement, intelligent electronic device addition, substation metering system improvements, monitoring system additions, etc.

## PROJECT DESCRIPTION & JUSTIFICATION

The purpose of this project is to provide funding for the upgrade of the 66 KV power transformer protection equipment at a number of PWC's vintage substations. This protection equipment, in many cases, is at the end-of- life and needs to be replaced with modern equipment which will provide for additional power transformer protection functionality.

## PROJECT DESCRIPTION & JUSTIFICATION

The purpose of this project is to systematically replace control buildings at T/D substations that have exceeded or are approaching their life expectancy due to structure or other environmental issues. This project will replace both the control building and the protective relaying equipment for the substation. PWC has begun the process of building and operating “smart stations”. This process will enable PWC to replace these structures and incorporate “smart station” micro-processor based protective relaying all into one package.

## PROJECT DESCRIPTION & JUSTIFICATION

The purpose of this project is to install a secondary oil containment system for both three phase power transformers and regulators located at two transmission-distribution substations and one point of delivery transmission station. The oil containment system will consist of a containment basin, oil filtration and remote alarm system. This project is recommended to comply with EPA statute 40 CFR 112-4.

## PROJECT DESCRIPTION & JUSTIFICATION

The purpose of this project is to replace the 66 kV primary and secondary 12 kV bus with a more modular steel column design that will accommodate a larger 3-phase LTC power transformer. Level the site and replace all UG distribution feeder circuit exits utilizing concrete enclosed duct-bank. Replace existing vacuum circuit breakers with new units. Replace existing transformer over-current and differential protective relaying as necessary to make use of IED technology.

## PROJECT DESCRIPTION & JUSTIFICATION

The purpose of this project is to relocate the existing FTI 66-12 kV Substation to a more suitable site that more effectively serves the load centers within this established area. The new site will provide means for additional substation capacity expansion in the future as this centralized area redevelops. Facilities planned include transmission switches which can be secured and switched remotely, a new primary 66 kV and secondary 12 kV substation bus and supporting structures, new 3-phase LTC power transformer, new vacuum circuit breakers, and a new control building. PWC plans to relocate its existing state-of-the-art substation protective relaying panels to the new site. All distribution feeder exits installed at the new site will be constructed in concrete encased duct-bank to reduce the cost of any future replacements.

## PROJECT DESCRIPTION & JUSTIFICATION

The purpose of this project is to relocate roadside distribution and transmission facilities including poles, conductors, guys and anchors, roadway lighting, transformers, secondaries and services. Facilities are relocated at the request of the City of Fayetteville to accommodate the widening of Langdon Street from Ramsey Street to Trinity Street.

## PROJECT DESCRIPTION & JUSTIFICATION

The purpose of this project is to provide for the replacement of 66 -12 kV power transformers as scheduled at PWC's equivalent 27 substations. A number of power transformers at these stations are nearing the end of their useful life as predicted by condition monitoring analytics. This project will provide for a swappable unit should any of the in-service transformers require immediate replacement prior to the scheduled substation rebuild. Transformer replacements are scheduled at FTI in FY 2020, at College Lakes and Purolator in FY 2021, at Cliffdale in FY 2022, at Yadkin Road in FY 2023, and at Hogan Street in FY 2025.

## PROJECT DESCRIPTION & JUSTIFICATION

The purpose of this project is to provide for the replacement of a 230-67 kV auto-transformer at Point of Delivery (POD) III. The existing unit is twenty eight years old. Dissolved gas analyses (DGA) indicate that there is excessive heating within the windings of this unit. Currently, it is inadvisable to re-energize this unit as it appears to be at the end of its useful life. This auto-transformer is critical from both a contingency perspective and system load allocation perspective.

## PROJECT DESCRIPTION & JUSTIFICATION

The purpose of this project is to construct a 230-66 kV substation consisting of a low profile bus assembly, a 230 kV circuit switcher, a 120/160/200 MVA auto-transformer, a 66 kV low profile bus assembly and four 66 kV circuit breakers with circuit exits and ties. This project will provide for fencing, screen landscaping, communication, relaying and complete related work as required. Long-term transmission studies indicate that an additional 66 kV source will be needed in the southern portion of our service territory to provide for contingency situations and to reduce circuit loading on several segments of the 66 kV sub-transmission system. Studies are currently underway to redefine the timing, scope, and need for this project. In FY18, PWC purchased the property for this site.

## PROJECT DESCRIPTION & JUSTIFICATION

The purpose of this project is to purchase the easements needed for the NESC compliant installation of overhead and underground distribution facilities and to facilitate the improved maintenance of existing facilities. Rights-of-way are sometimes needed to allow for the construction or relocation of distribution lines, poles and equipment for system improvement projects. Rights-of-way are also sometimes too narrow for maintenance or operation of equipment and should be increased or widened. In FY17, PWC began a campaign to protect and to remove dangerous trees associated with its distribution assets. Additional ROW will need to be acquired in order for us to maintain adequate clearances for our overhead facilities.

## PROJECT DESCRIPTION & JUSTIFICATION

The purpose of this project is to acquire the property for the fifth 230-66 kV Point of Delivery identified in PWC's Transmission Planning Study to be located on the north side of PWC's service territory. This delivery point's preferred location will be in close proximity to the Duke Energy- Progress Ft Bragg-Woodruff Street 230 kV transmission line.

## PROJECT DESCRIPTION & JUSTIFICATION

The purpose of this project is to replace all three 230 kV motor operated air-break switches (MOABS) Point of Delivery (POD) I. These MOABS are 1970's vintage equipment and their reliability is questionable. They can no longer be rebuilt because the parts are no longer available. Due to technological improvements, an improved version is currently available. In FY 2020, Duke Energy Progress (DEP) improved the reliability of PWC's connection to their system at this delivery point by installing a breaker and half scheme at their station. In order for PWC to ensure that it maintains a reliable 230 kV connection at its auto-transformers, these switches need to be replaced.

## PROJECT DESCRIPTION & JUSTIFICATION

The purpose of this project is to install sectionalizing equipment and fiber optic communications systems as required to improve the reliability, safety, and operability of the existing UG distribution system in the Downtown area of Fayetteville. This project will also install UG sumps in vaults where necessary and will replace long secondary bus and tap fuses as required to provide for proper insulation protection of the flame retardant, low smoke, non-Halogen, Polyolefin insulated secondary cables that have been installed in this UG network.

## PROJECT DESCRIPTION & JUSTIFICATION

Replace existing underground distribution infrastructure as necessary and convert overhead distribution infrastructure to underground as required to facilitate the City of Fayetteville's long-range plans for streetscape improvements downtown. During FY 2021, PWC will install electrical conduit in conjunction with the Water Resources Market House Facility Replacement project to provide for future electrical facility redundancy as downtown businesses expand and reliability demands increase. This project will provide funding for miscellaneous streetscape improvements not otherwise identified in the Capital Improvement Program.

## PROJECT DESCRIPTION & JUSTIFICATION

This project is a companion project for the Outage Management System that is scheduled to be completed in the 2nd Quarter of FY 2020. The Distribution Management System (DMS) will provide for real-time load-flow calculation analytics which provides the means to perform automatic switch order management distribution, sub-transmission feeder reconfiguration and distribution automation. In essence, this software provides the means to improve the overall performance of our electrical distribution and sub-transmission systems. This system will help improve our system service reliability and also reduce our system losses.

## PROJECT DESCRIPTION & JUSTIFICATION

The heat exchangers on the eight (8) gas turbines at the Butler-Warner Generation Plant are corroding and are approaching their end-of-life usefulness. BWGP personnel currently have to cool these heat exchangers by spraying water during the summer months just to maintain an acceptable oil temperature. This project will replace the heat exchangers on the eight (8) gas turbines over a three (3) year period.

## PROJECT DESCRIPTION & JUSTIFICATION

The purpose of this project is to re-tube three (3) heat steam generators. The boiler tubes in the steam generators are over thirty (30) years old and are constantly failing. Replacement of these tubes will improve steam generator reliability and will help PWC meet the delivery performance factor contained within the Duke Energy Progress contract through calendar year 2032.

## PROJECT DESCRIPTION & JUSTIFICATION

The purpose of this project is to replace the existing acid and caustic demineralizer system with a reverse osmosis demineralizer system. The current acid and caustic demineralizer system requires frequent repairs and requires that acid and caustic materials be stored on-site. The requested replacement system does not require chemical storage.

## PROJECT DESCRIPTION & JUSTIFICATION

The purpose of this project is to construct a 1.5 MW battery storage system adjacent to PWC's Community Solar site and connect it in tandem with the existing 500 kW battery storage facility already in use. This 1.5 MW addition will provide additional cost savings to PWC during coincident peak demands and will enable us to meet the battery storage threshold specified in our current Duke Energy Progress contract.

## PROJECT DESCRIPTION & JUSTIFICATION

The purpose of this project is to develop a source of renewable energy from sources other than solar and battery storage. The development of this source will reduce PWC's reliance on the open market for purchasing renewable energy credits in order to meet its renewable energy portfolio commitment.

## PROJECT DESCRIPTION & JUSTIFICATION

The purpose of the project is to replace existing overhead primary and secondary conductors and devices along the north side of Bragg Boulevard from Stamper Road to Carol Street with underground distribution facilities and to replace and improve roadway lighting in this area. Conduit and vaults will be installed to accommodate both municipal and other communication facilities. This project is complementary to the previous Gateway Improvement Projects that have been completed in an effort to improve the aesthetics of the major arteries into Fayetteville. This project will foster redevelopment in this area because of its close proximity to the Fort Bragg Military Reservation.
