1. Acknowledgement of this addendum must be done on the Bid Summary page listed within the bid package.

2. The solicitation is hereby modified as follows:

**M2. BID SUMMARY, SECTION A, 1**

*It was found that the bid summary section included an incorrect contract time frame. Please note that the correct language is listed below.*

**A. BIDDER agrees that Work shall be completed within the time frame indicated in the Agreement as follow:**

**1. All work described herein to be complete, including restoration and all punch list items from Notice to Proceed until June 30, 2023**

3. Following are questions received about the solicitation and the SME's answers to the questions.

Q1. The specification calls for the lining system to be guaranteed by both the contractor and the manufacturer. Is PWC requiring a "Performance Warranty" from the manufacturer or just a money back to contractor warranty? Should the manufacturer's warranty be included in the bid package?

**Answer 1:** The guarantee from the contractor is for the work performed, and the guarantee from the manufacturer is for the material. The selected contractor will need to furnish both guarantees as part of the submittal process. It is not necessary to submit the manufacturer's warranty with the bid package.

Q2. In situations where cured-in-place pipelining, pipe bursting and other methods of sewer main lines rehabilitation occur, there is usually large volumes of inflow introduced into the manhole. In addition, when manhole cones are removed for pipe lining purposes, the manhole needs to be repaired on the inside and in some situations on the outside also. Should these (2) instances be separate bid line items or should the pricing be added to the existing vertical or square foot prices?

**Answer 2:** There will be no separate payment for these items. The current cured-in-place pipe lining contract requires the contractor to install hydrophilic end seals prior to lining. This should greatly reduce the amount of infiltration entering the manhole. For those manholes where the

cone is removed, the cost to repair the lining will be paid at the per vertical foot price – for repairs to the inside and/or outside of the manhole.

Q3. Would you consider Quadex Structure Guard-FG an approved fiberglass-reinforced epoxy lining system per division 2 section 02763 for this project?

**Answer 3:** No, not at this time.
