Sewer Installation Project Begins

Annexation Phase V Project Area 32 East Section 2 – Stoney Point Road & Dundle Road

Installation of sanitary sewer services in Project Area 32 East Section 2 is scheduled to begin in July 2026. Fayetteville PWC is performing this work on behalf of the City of Fayetteville. PWC has contracted with Vortex Civil Infrastructure to install sewer services to 67 properties highlighted on the enclosed map. Installation will begin on Dundle Road. This project is expected to be complete and services available for connection by Fall 2027. Below is a general description of the work and special notes for residents. For more details on what to expect, please visit:

www.FayPWC.com/Annexation-Project32-EastSec2

Preparing for sewer installation

Crews prepare the area by clearing easements and rights-of-way, setting temporary fencing, and establishing a staging area.

- Contractors are not responsible for relocating or replacing plants, trees and/or shrubs.
- The contractor will remove plants, trees, and/or shrubs in the right-of-way or easements, and set them aside, but the contractor will not relocate or maintain the plantings (re-plant, relocate, water, fertilize, etc).
- Grass disturbed during the project will be replaced after final construction is completed.
- Homeowners should review the proposed location of their 'cleanout' where the service lateral connects with the service line to the home.
- The location of the cleanout will be marked 'C/O' or 'S/L' on the pavement or with a stake inside the right-of-way (typically your property line adjacent to the street where your utility service meters and electric transformer boxes are located).
- If the cleanout needs to be moved, relocation will need to be coordinated with PWC before work begins on your street.
- The cost to relocate the service lateral after installation is the responsibility of the homeowner.

What to expect

- It may be months before you see construction on your street.
- Work will involve numerous crews in the areas where sewer is being installed and regular work hours for the crews are 7:00 a.m. – 5:00 p.m., Monday through Friday.
- PWC realizes this work will cause inconveniences for residents. Installing sewer services in established neighborhoods is very challenging and unfortunately disruptive. Because sewer lines are deeper than water, gas, cable, phone and electrical lines, there is a possibility of disturbing existing utilities. Every effort will be made to avoid interruptions; however, all efforts will be made to restore services as soon as possible if interruption occurs.

BUILDING COMMUNITY CONNECTIONS SINCE 1905

AN EQUAL EMPLOYMENT OPPORTUNITY EMPLOYER

- As work begins on your street, asphalt will be removed and crews will dig trenches in the center of the street to install gravity sanitary sewer lines.
- Residents should avoid parking on the street. During construction, roads will remain passable to local traffic and equipment may be placed in the right-of-way overnight.
- The public right-of-way is the property line adjacent to the public street where utility services are currently located such as your water meter or phone services.
- For the safety of residents and workers, please reduce speed in construction areas to minimize the spread of debris and dust and keep children away from the construction area and equipment.
- The streets will be patched temporarily during construction and paved within 18 months, allowing them time to settle from the construction.
- If you or someone in your home has medical needs or special circumstances, please let PWC know so that the construction crews can accommodate those needs.

Who to contact with concerns

If you have special needs or if a problem occurs because of this work, please contact one of the following PWC representatives:

Project Coordinator	Water Resources Engineering Department	Operations center
On worksite daily	(910) 223-4730 <i>During normal business hours</i>	(910) 483-1382 <i>After normal business hours</i>

Stay informed

An in-person community construction meeting to share details of the project was held on July 21, 2026. If you were unable to attend and would like more information about this project, please call 910-223-4730. If your residence is scheduled to have sewer services, PWC will send the property owner additional information regarding service connection once the work is complete. Thank you for your patience and cooperation during this utility installation project.
